I. Why our project and not any other ?

- ⊕ Are you tired to search the latest news on Internet? Waste your time to find the right web page?
- ⊕ We have the solution! My RSS News!
- ⊕ You access to our user interface and you choose to receive the latest news directly by email.
- ⊕ We take care of everything: content retrieving of RSS to the email sending.

II. Prerequisite

a) Operating Systems

 Linux (ubuntu)

Or

 Mac

b) Tools

 Installing tools from the command line if necessary:

⇒ Curl : `$ apt-get install curl`

⇒ Grep : `sudo apt-get install grep`

⇒ Postfix : `sudo apt-get install postfix`

 Configuring Postfix to Send Mail from Mac OS: <http://benjaminrojas.net/configuring-postfix-to-send-mail-from-mac-os-x-mountain-lion/>

 Configuring Postfix to Send Mail from Linux (Ubuntu): <http://doc.ubuntu-fr.org/postfix>

III. How to launch ?

First of all, you have to make the script executable :

```
$ chmod +x script_catchRSS.sh
```

Then you can launch it in your terminal :

```
$ ./script_catchRSS.sh
```

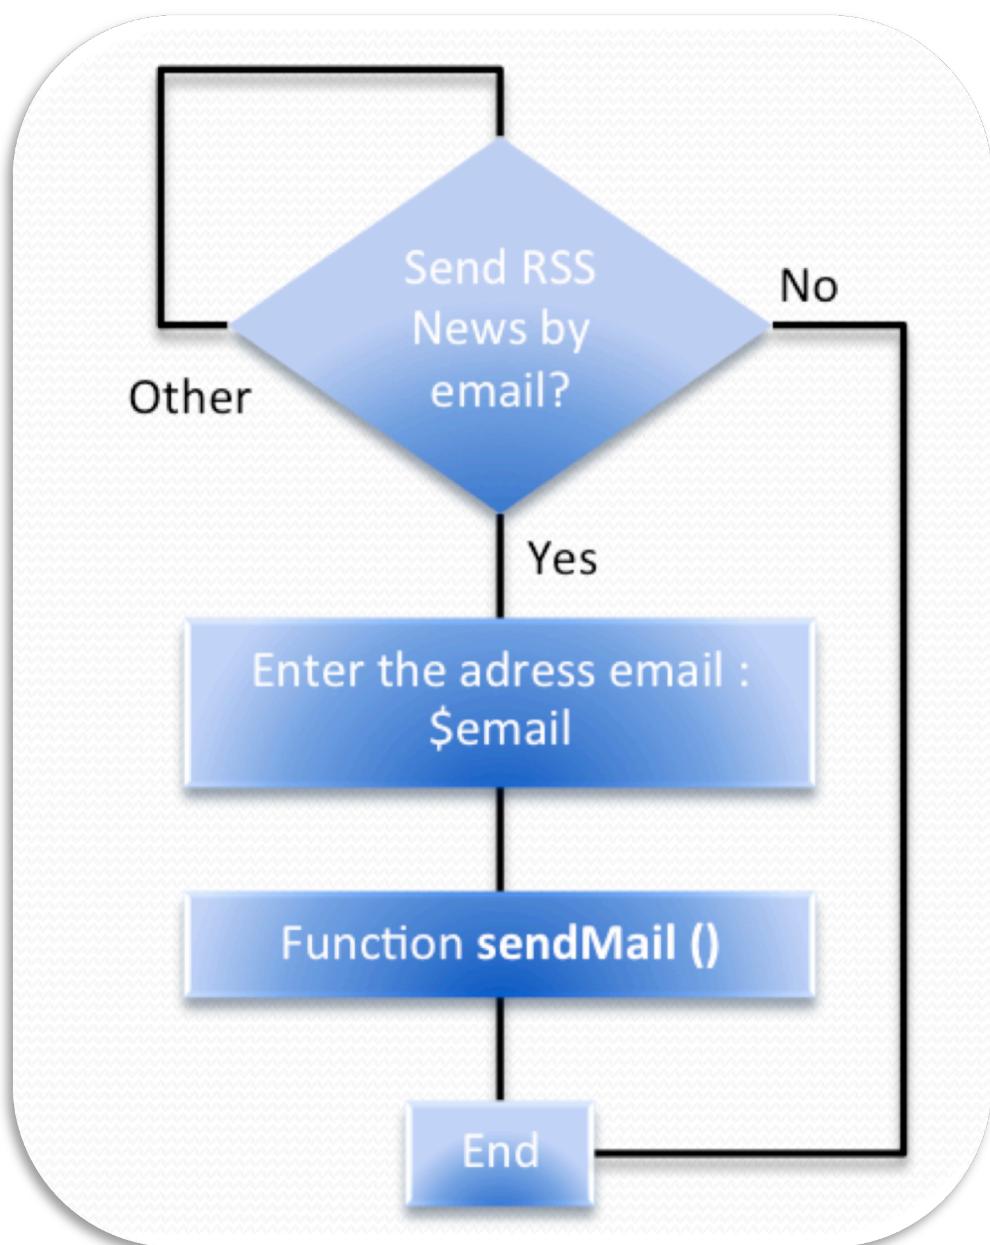

The default RSS URLs are :

-  <http://www.sport.fr/RSS/sport1.xml>
-  <http://www.futura-sciences.com/rss/actualites.xml>

If you desire receive Your News, just do it...

IV. Which are the issues ?

Let's try...
